# Has the so called "3+2" university reform shortened the degrees time? 

Maria Luisa Maitino

Giulia Peruzzi

IES 2011 -Florence, 30 May - 1 June 2011

## The outline of this presentation

1. Goals of the university reform
2. Econometric strategy
3. Desctiptive analysis
4. Results
5. Conclusions

## Issues and solutions

There are too small enrollments
There are many drop-outs
Too long times to degree
There is great mismatch

More courses
Short programmes
Short degree
More displaces

Decreto Ministeriale 5093 /11/1999

## The econometrics of program evaluation

There is a harsh theoretical confrontation between different "schools" (e.g. Imbens and Wooldridge, JEL 2010 vs. Heckman, NBER WP 2010). For the applied economist, the adoption of one strategy or another is also connected to data and to the availability of credible instruments

Let us consider the reduced-form approach and focus on a few inteconnected aspects typical of any matching procedure:
$\checkmark$ matching reduces bias due to observed covariates
$\checkmark$ to make the selection on observables more credible, use a large number of covariates
$\checkmark$ choices to be made when dealing with small samples, for which literature does not provide univocal guidance: metrics, number of matches (bias/variance trade-off)
$\checkmark$ what is known is that combining matching and regression adjustment techniques reduces bias and leads to more robust inferences

## The contribution of this paper (1)

$\checkmark$ we contribute to a first wave (Bini, Chiandotto 2003; Bondonio 2007) of ex-post impact evaluations of the Italian University Reform (the so called 3+2), with respect to times and rate of degrees.
$\checkmark$ we consider the impact for three Italian Universities
$\checkmark$ the outcome indicator are the graduates within a given time
$\checkmark$ we opt for a matching approach, using all the available informations in our database as pre-treatment variables, so as to capture, directly or not, a vast array of characteristics

## The contribution of this paper (2)

## More specifically...

$\checkmark$ we choose to work on the estimated propensity score and its specification (Rosenbaum and Rubin, 1983)
$\checkmark$ check for balancing property and common support
$\checkmark$ use the difference in means and variances after matching to guide the choice of the number of matches
$\checkmark$ use the bias-adjusted matching estimator of Abadie and Imbens (2011), with the propensity score as a distance metrics, regression adjustment for all the pretreatment variables and an exact matching for faculty and university.

## What do we evaluate? (1)

| University | freshmen | treated | controls |
| :--- | ---: | ---: | ---: |
| Firenze | 8,635 | 3,872 | 4,763 |
| Pisa | 6,938 | 3,961 | 2,977 |
| Siena | 3,109 | 1,790 | 1,319 |
| all | 18,682 | 9,623 | 9,059 |

We consider only those freshmen that enrolled during the year 2000/01 when the students themselves decided to enrol at "nuovo ordinamento"

Data have been collected from the register office of the three Tuscany universities - Florence, Pisa and Siena-, and collect all the individual data of all the students

## What do we evaluate? (2)

the shift rate is very different amoung the faculties

| Faculty | freshmen | shift rate | CL | DU | LILV | L2LV | LSCU |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| AGRARIA | 510 | 62.75 | 142 | 48 | 204 | 116 | 0 |
| ARCHITETTURA | 780 | 23.97 | 593 | 0 | 140 | 15 | 32 |
| ECONOMIA | 2,374 | 53.29 | 826 | 282 | 802 | 464 | 0 |
| FARMACIA | 467 | 61.67 | 175 | 4 | 33 | 0 | 255 |
| GIURISPRUDENZA | 1,870 | 27.75 | 1,351 | 0 | 341 | 160 | 18 |
| INGEGNERIA | 2,341 | 68.99 | 638 | 85 | 713 | 882 | 23 |
| INTERFACOLTA | 404 | 88.86 | 21 | 20 | 243 | 120 | 0 |
| LETTERE E FILOSOFIA | 2,709 | 49.83 | 1,294 | 58 | 972 | 385 | 0 |
| LINGUE E LETTERATURE STRANIERE | 277 | 50.54 | 137 | 0 | 128 | 12 | 0 |
| MEDICINA E CHIRURGIA | 1,948 | 79.26 | 182 | 223 | 989 | 38 | 516 |
| MEDICINA VETERINARIA | 115 | 59.13 | 47 | 0 | 15 | 3 | 50 |
| PSICOLOGIA | 948 | 25.63 | 710 | 0 | 171 | 67 | 0 |
| SCIENZE DELLA FORMAZIONE | 936 | 24.57 | 713 | 0 | 182 | 41 | 0 |
| SCIENZE MFN | 1,676 | 52.45 | 611 | 183 | 544 | 338 | 0 |
| SCIENZE POLITICHE | 1,228 | 43.16 | 651 | 45 | 379 | 153 | 0 |

Prior to reform : CL : 4 yrs - DU : 3 yrs
Post reform : L1LV : 3 yrs - L2LV : +2 yrs - LSCU : 5 yrs

## How do we do it?

## Preliminary descriptive analysis...

Estimation and analysis of $p$-score and its balancing properties

Bias-corrected matching estimator (Abadie and Imbens, 2011)...
based on archive data, in order to identify possible differences between treated and control students
based on all available variables. It is at this stage that we decide how many controls guarantee the most similar distribution, for each variable, between treated and controls
using a well-specified p-score (balancing score) as a distance. We also use a regression-based bias-correction (doubly-robust procedure)

## Some descriptive outcomes

Degree rates coorte 2002/03

|  | LILV | Laurea magistrale <br>  |  |
| :--- | ---: | ---: | ---: |
|  | within 4 years | within 6 years |  |

Degree rates within six years from enrollment

|  |  | Laurea Magistrale (coorte 2002/03) |  |
| :--- | ---: | ---: | ---: |
|  | CL |  | Excluded who stops at |
|  | (coorte 2000/01) | ALL | L1LV |
| FI | $22 \%$ | $9 \%$ | $12 \%$ |
| PI | $15 \%$ | $12 \%$ | $15 \%$ |
| SI | $29 \%$ | $11 \%$ | $16 \%$ |
| All | $21 \%$ | $10 \%$ | $14 \%$ |

## Some differences before matching

Let's have a look at the differences between the avg values of relevant variables (matching and outcomes variables)

| variable | treated | controls |
| :--- | :---: | :---: |
| male | $47.3 \%$ | $44.9 \%$ |
| female | $52.7 \%$ | $55.1 \%$ |
| avg high school final mark (out of 100) | 79.88 | 78.17 |
| attended vocational school | $3.3 \%$ | $4.4 \%$ |
| attended tecnichal school | $28.3 \%$ | $31.9 \%$ |
| attended high school specializing in education | $5.4 \%$ | $7.7 \%$ |
| attended other school | $5.6 \%$ | $7.5 \%$ |
| attended high school in humanities/sciences | $57.3 \%$ | $48.5 \%$ |
| lived in the city before enrolling | $33.0 \%$ | $27.9 \%$ |
| commuter | $45.2 \%$ | $43.0 \%$ |
| moved to the city after enrolling | $21.7 \%$ | $29.2 \%$ |
| lagged enrollment | 2.28 | 2.49 |
| attend courses with enrollmentrestriction | $24.9 \%$ | $1.2 \%$ |
| graduated before 2008 | $51.4 \%$ | $33.2 \%$ |

## L1LV vs CL: Do we have a common support?

| Shift | Freq. | Percent | Cum. |
| :--- | :---: | :---: | :---: |
| 0 | 6,648 | 67.12 | 67.12 |
| 1 | 3,256 | 32.88 | 100 |

Untreated: Off support
Untreated: On support
Treated

| Estimated |  |  |
| ---: | :---: | :---: |
|  | propensity | score |
| Smallest | 0.070 | Treated |
| $1 \%$ | 0.107 | 0.094 |
| $5 \%$ | 0.150 | 0.172 |
| $10 \%$ | 0.168 | 0.195 |
| $25 \%$ | 0.201 | 0.259 |
| $50 \%$ | 0.257 | 0.305 |
| Mean | 0.256 | 0.490 |
| $75 \%$ | 0.296 | 0.915 |
| $90 \%$ | 0.324 | 0.940 |
| $95 \%$ | 0.338 | 0.946 |
| $99 \%$ | 0.887 | 0.953 |
| Largest | 0.948 | 0.955 |

## Concluding remarks

Leaving aside the issue of the external validity of these results... we have found here that:

- In general, reform have proved to be more effective for the short degrees (L1LV)
- As for the long degrees, both timing that rates are disappointing

This might be due also to the too short, and early, observation period...

A more comprehensive evaluation might be required, that accounts for additional coohorts and analyses whetether the impact improves in the following years.
